(Sid) Siddhant **Khanna**

Senior Software Engineer

Ph: (647)-760-4086 | **Email**: siddhant.khanna@gmail.com | Toronto, ON

CAREER PROFILE

Senior Software Engineer currently working at a global fortune 500 company leading projects to deliver end user experiences. Led and contributed to projects and, collaborated with stakeholders to deliver internal and external facing distributed system initiatives in an Agile environment (Scrum & Kanban) with teams of sizes 2-15.

TECHNICAL SKILLS

JavaScript (ES6), React, Redux, NodeJS, REST API (express), GraphQL (Apollo), Python, SQL, NoSQL (MongoDB), Redis, HTML5 & CSS3 (Styled Components), JSON, axe, functional & unit test (jest), data structures and algorithms, Pivotal Cloud Foundry, JIRA, Git, Artillery, New Relic, Jenkins, Snyk, Postman, GitHub, SonarQube, Kibana, Dynatrace.

PROFESSIONAL EXPERIENCE

Manulife / John Hancock: May 2019 – *Present*

- Senior Software Engineer

Led and contributed to projects that impacted internal and external facing clients. Collaborated with product manager/owners to establish functional and non-functional requirements, design and build new features. Worked on full stack responsive web applications. Carried out production deployments, triage and resolved production issues and bugs. Conducted code reviews as maintainer for several repositories.

- Created an internal application (a cross functional project) which eliminated use of proprietary software ***saving $120,000-$300,000 each year*** and ***reduced implementation time by 65%*** for configuring business logic.
- Co-created divisions' core backend GraphQL engine (Gateway architecture with federated microservices) which improved scalability, availability, maintainability, and performance (***reduced average response time by 80%***) for an array of applications.
- Implemented Jenkins pipelines with release branching strategy streamlining deployment process.
- Led feature development that automated manual processes saving ***$100,000 each year*** and ***reduced operation time by 85%.***
- Improved performance of connection between our internal application to our backend engine by batching requests through Dataloader pattern.
- Contributed to inner-source framework that standardizes UI functionality at company level while maintaining accessibility standards.
- Integrated Azure Single-Sign-On authentication and authorization which improved security for internal application and set pattern for various other internal applications to leverage.
- Mentored new engineers through pair programming, conducted knowledge transfer sessions, demonstrated applications to stakeholders and wider audiences, collaborated with external vendors, and created POTs and design documentations/RFCs to research technologies and solutions.

PROJECTS

Space and Culture Research Group: Sept 2018 – Dec 2018

Created web application collaboration with team of 6 using react, redux, Django, REST APIs, arcGIS and SQL (MySQL) database for real world client. Application enabled users to give safety ratings of city sidewalks. Main point of contact.

- Learned 4 different languages and engineering tools while developing features simultaneously.

EDUCATION

University of Alberta – Bachelor of Science, Computer Science Sept 2015 – May 2019
