# (Sid) Siddhant **Khanna**

*Full-Stack Software Engineer*

**Ph**: (647)-760-4086 | **Email**: siddhant.khanna@gmail.com | Toronto, ON

## CAREER PROFILE

*Software Engineer currently working at a Fortune 500 company on Full-Stack web applications. Saved over 60% time in multiple processes. Worked in teams of sizes of 2-15 on internal and client facing applications in an Agile (Scrum & Kanban) environment.*

## TECHNICAL SKILLS

JavaScript (ES6), React, Redux, NodeJS, REST API (express), GraphQL (Apollo), Python, Java, SQL, NoSQL (MongoDB), Redis, HTML5 & CSS3 (Styled Components), data structures and algorithms, JWT, Pivotal Cloud Foundry, JIRA, Git, Artillery, New Relic, Snyk, Jenkins, SonarQube, Kibana, Dynatrace, Jest.

## PROFESSIONAL EXPERIENCE

**Manulife / John Hancock:** May 2019 – *Present*

- *Senior Software Engineer*

Developed React / Redux responsive web-based applications, Implemented GraphQL and REST API microservices, setup accompanying NoSQL databases in NodeJS. Implemented axe, functional & unit test. Carried out production deployments, triage and resolved production issues, and bugs. Collaborated with UI/UX designers and product managers. Conducted Code Reviews as a maintainer for several repositories.

- Created an internal application (a cross functional project) which eliminated use of proprietary software ***saving $120,000-$300,000+ each year*** and ***reduced implementation time by 65%*** for configuring business logic.
- Co-created divisions' core backend GraphQL engine (Gateway architecture with federated microservices) which improved scalability, maintainability, and performance (***reduced average response time by 80%***) for an array of applications.
- Improved performance of connection between our internal application to our backend engine by batching requests through Dataloader pattern.
- Configured Kibana Critical Alert Watcher which enabled team to find bugs faced by clients early in production and ***improved response time to production issues by 60%.***
- Contributed to an inner-source framework that impacts UI functionality at company level. Also, Implemented Accessibility functionality for ease of use for people with disabilities.
- Integrated Azure Single-Sign-On authentication which improved security for internal application.
- Received Highest performance level rating of Exceptional reserved for 1% of employees in the division.
- Mentored new engineers through pair programming, demonstrated applications to stakeholders and wider audiences, and created POTs and design documentations to research technologies and solutions.

## PROJECTS

**Space and Culture Research Group:** Sept 2018 – Dec 2018

Created web application in collaboration with team of 6 using react, redux, Django, REST APIs, arcGIS and SQL (MySQL) database **for real world client**. Application enabled users to give safety ratings of city sidewalks. Assessed clients' functional and non-functional requirements throughout the process as main point of contact.

- ***Learned 4 different languages and tools*** while developing features simultaneously.

## EDUCATION

**University of Alberta –** Bachelor of Science, Computer Science Sept 2015 – May 2019

- Mentored StarterHacks hackathons at University of Waterloo.
- Provided KT sessions for interns at Manulife to better understand codebase and technologies used.
